# Viktor Shevchenko

## Full-Stack .NET / Angular Engineer

Yerevan, Armenia · Open to remote roles
LinkedIn · GitHub

## Summary

Full-stack .NET / Angular engineer with 20+ years of .NET experience and 7+ years building Angular applications. Most recently, one of two developers sharing end-to-end ownership of an enterprise Security & Compliance platform used by thousands of employees, working across the Angular frontend, REST APIs, and database layer.

Experienced in legacy modernization, SQL performance optimization, and security hardening, including upgrading a production application from Angular 16 to 22. Comfortable collaborating remotely with distributed teams, with experience serving UK and US clients.

## Skills

**Backend & APIs:** C# · .NET · ASP.NET Core · EF Core · Dapper · Hangfire · RESTful Web API · ASP.NET Core Identity

**Frontend Ecosystem:** Angular · TypeScript · RxJS · SCSS · Angular Signals · Standalone Components · AG Grid · MSAL.js · PrimeNG · JavaScript · Kendo UI · SignalR · React (Redux) · Vue.js

**Cloud, DevOps & Tools:** Microsoft Azure · Azure Kubernetes Service (AKS) · Docker · Git · Azure DevOps Pipelines · GitLab CI · Jenkins · Azure VM

**Databases & Data:** MS SQL Server · T-SQL Execution Plan Analysis · MySQL · EventStoreDB · Elasticsearch · MinIO

**Architecture & Practices:** Microservices · Event-Driven Architecture · CQRS · DDD · SOLID · BDD · TDD

**AI-Assisted Development:** GitHub Copilot · Claude Code · AI-Assisted Refactoring & Test Generation

## Professional Experience

### DataArt

05/2021–10/2026
Yerevan, Armenia

Full-Stack Software Developer

#### Enterprise Security & Compliance Platform

Served as one of two developers in a five-person team (two developers, two QA engineers, one business analyst), sharing end-to-end ownership of a platform utilized by Security and Compliance teams for policy management and by thousands of employees for data tracking and checklist completion. Upgraded its Angular frontend from version 16 to 22 and worked with .NET 8–10 services.

- Developed core security workflows in Angular, including role-based access control (RBAC), dynamic Security Exception and Custom Security Rule forms, and template-driven checklists.
- Owned the Checklist Kanban board end to end, including the Angular UI, REST API, business logic, and data access layers.
- Extended Custom Security Rules with Account Location Rules across the UI, data access, and SQL processing, supporting dynamic fields and configurable rule enforcement.
- Enhanced the audit framework by introducing declarative, attribute-based logging, providing compliance teams with a consistent audit trail.
- Refactored the data layer to standardize Security Exception processing across user, project, and client levels.
- Containerized the Angular frontend in collaboration with DevOps and resolved build failures in Azure DevOps Pipelines.
- Upgraded the platform from Angular 16 to Angular 22 without disrupting production availability.
- Worked closely with the business analyst on requirements and with QA on testing.

**Tech stack:** Angular · SCSS · TypeScript · RxJS · Angular Signals · Standalone Components · MSAL.js · AG Grid · .NET · C# · Dapper · Hangfire · MS SQL Server · Azure · Docker

### Call Management & Recording System (earlier project)

Member of one of several feature teams on a large-scale, microservices-based call recording platform for enterprise clients, built with .NET 6.

- Contributed to a production system built on event sourcing (EventStoreDB) and deployed on Azure Kubernetes Service, working across services to configure call processing.
- Expanded automated behavior-driven development (BDD) test coverage for call-processing scenarios.

**Tech stack:** .NET · C# · EventStoreDB · Elasticsearch · MinIO · Azure Kubernetes Service (AKS)

## US FinTech Client

02/2021–04/2021
United States - Remote

Full-Stack Software Developer (B2B Contractor)

### Internal Chat Application

Designed and prototyped an internal chat application for visualizing messages with complex hierarchical relationships, using .NET Core 3 and React with Redux.

**Tech stack:** .NET Core · C# · TypeScript · React (Redux)

## Blueberry Consultants Ltd

12/2018–02/2021
United Kingdom - Remote

Full-Stack Software Developer (B2B Contractor)

### Care Home Management System

Developed and maintained a care home management system using Angular 8–10 and .NET Core 3.

- Owned the design and implementation of a reusable CRUD framework that supported parent-child relationships, significantly reducing boilerplate across client- and server-side modules.
- Led security hardening by implementing IDOR protection through ID hashing and custom model binders.
- Engineered integrations with a medication hub and a delivery tracking service.

**Tech stack:** Angular · SCSS · TypeScript · PrimeNG · RxJS · .NET Core · C# · ASP.NET Core · ASP.NET Core Identity · EF Core · Hangfire · MS SQL Server · MySQL · Docker · GitLab CI

### Recruitment CRM

Developed and maintained a CRM system for UK-based recruitment agencies using ASP.NET Web API, Entity Framework 6, and AngularJS.

- Developed a high-throughput timesheet and work-history import engine using ASP.NET Web API and AngularJS, streamlining data entry for UK-based agencies.
- Engineered the new business logic to cover the latest legal changes.

**Tech stack:** AngularJS · JavaScript · Less · Kendo UI · SignalR · ASP.NET Web API · C# · Entity Framework · Hangfire · MS SQL Server · Azure VM · Jenkins

## Arcadia

07/2014–12/2018
Saint-Petersburg, Russia

Full-Stack Software Developer

### School Management Platform

Developed and maintained a school management platform for an e-learning service provider, working across backend and frontend development, including legacy modernization with ASP.NET MVC 5 and modern frontend libraries.

- Modernized mission-critical subsystems by migrating legacy ASP components to ASP.NET MVC 5, improving maintainability and development efficiency.
- Designed and implemented a dynamic filtering system for the Calendar module and refactored business logic across Schedule and Messaging modules to support complex workflows and evolving business requirements.

- Developed responsive, interactive interfaces for the Schedule and Weekly Plans modules using Knockout.js and Vue.js, integrating modern client-side technologies into the existing MVC application.
- Strengthened application reliability by expanding unit test coverage for complex business logic in the Schedule and Weekly Plans subsystems.

**Tech stack:** ASP.NET MVC · C# · JavaScript · TypeScript · Knockout.js · Vue.js · jQuery · Less · MySQL

### ViaCode

05/2011–01/2014
Saint-Petersburg, Russia

.NET / Performance Engineer

#### Enterprise Legal Management Platform

Developed and maintained an enterprise legal management platform using .NET Framework 3.5 (ASP.NET 3.5, ADO .NET) and MS SQL Server 2008.

- Engineered an internal query engine to optimize SQL generation for user-defined fields, significantly improving query execution performance and reducing server load.
- Analyzed and restructured high-traffic database schemas to optimize frequently executed queries and improve overall platform performance.
- Redesigned an internal SQL performance testing tool to capture additional MS SQL Server performance metrics, enabling more comprehensive query performance analysis.

**Tech stack:** .NET Framework · C# · ASP.NET · ADO.NET · JavaScript · MS SQL Server

### Earlier Software Engineering Experience

2002–2011
Saint-Petersburg, Russia

.NET Software Engineer

Held software development and engineering roles across enterprise, healthcare, ERP, integration, and database applications.

**Tech stack:** C# · .NET Framework · ADO.NET · Windows Forms · MS SQL Server

## Portfolio Projects

### SupportDesk AI

A support-ticket assistant with retrieval-augmented replies and citations, tool calling with human confirmation, token budgets, cost tracking, prompt-injection defenses, and model evaluation.

Angular · .NET · pgvector · Docker · AI agents · Claude · Evaluation · LLM · RAG

https://github.com/victor-v-shevchenko/SupportDesk-AI

### TimeTrack

An employee time-tracking application built with an ASP.NET Core Minimal API, EF Core, PostgreSQL, Angular, Docker Compose, and integration tests against a real database.

Angular · .NET · PostgreSQL · Docker

https://github.com/victor-v-shevchenko/TimeTrack

## Certificates & Courses

- Claude Code in Action by Anthropic
- Microsoft Certified Professional Developer
- Clean AI: Agentic Discipline by O'Reilly
- Turbo Mode: Optimizing Productivity with AI Tools and Agents by Unlearn

## Languages

**English:** Professional working proficiency

**Russian:** Native
